Definition: Balancedly Splittable (Kharaghani et al., 2021)

- An OD X with $n \times \ell$ submatrix X_1 admits a stable (n, ℓ, a, b) split if

$$X_1 X_1^t = \sigma(cI_n + aA + b(J_n - I_n - A)),$$

where $c \mid \ell$.

- The split is unstable if it is not stable and

$$X_1 X_1^t = \ell I_n + aA + b(J_n - I_n - A)$$

after replacing each variable with 1.

Auxiliary Matrices

Definition: Auxiliary Matrices

$$\begin{pmatrix} G & F & -F \\ E & A & B \\ -E & B & A \end{pmatrix}$$

Equiangular Lines and Hadamard Matrices

- each split gives equiangular lines
- parametric conditions of the proposition are satisfied
- we can always construct unbiased Hadamard matrices

Unbiased ODs

Definition: Unbiased ODs (Kharaghani and Suda, 2018)

- X_1 and X_2 be two $OD(n, s_1, \dots, s_u)$ in $\{\pm z_1, \dots, \pm z_u\}$.
- X_1 and X_2 are unbiased if there is a Hadamard matrix H such that

$$X_1 X_2^t = \left(\alpha^{-\frac{1}{2}} \sum_i s_i z_i^2 \right) H.$$

for some $\alpha \in \mathbb{R}^+$.

• $\left\{ \begin{array}{l} \text{stable split} \\ \text{equiangular lines} \\ \text{param. cond.} \end{array} \right\} \Rightarrow \text{unbiased ODs}$

Unbiased ODs

- Recall:

$$X = \begin{pmatrix} G & F & -F \\ E & A & B \\ -E & B & A \end{pmatrix}.$$

- Take

$$Y = \begin{pmatrix} G & F & F \\ E & A & -B \\ -E & B & -A \end{pmatrix}.$$

- Then $XY^t = 2 \left(\sum_i s_i z_i^2 \right) H$, where H is Hadamard.

The background of the slide features a large, light blue watermark of the University of Limerick logo. It consists of a shield with a yellow sunburst in the center and a banner below it that reads "FIAT LUX".
